Viper:

1. One rail fence rail has been dislodged. Probably by kids climbing over as it is the first 'clear' section without hedging when coming from the station. I've changed the risk to low. Photo 1 - I can screw it back.

2. The spring to the gate isn't strong enough to close it thereby allowing small children to 'escape'. I've changed the risk to low. Photo 2 - I can re-position the bottom bracket and get some more life out of it.

We have our first mole...
